"PAP-1, a novel target protein of phosphorylation by Pim-1 kinase.";
EUR. J. Biochem. 267:5168-5178(2000).
-!- CATALYTIC ACTIVITY: ATP + a protein = ADP + a phosphoprotein.
-!- SUBUNIT: Binds to Rep.
-!- SUBCELLULAR LOCATION: Cytoplasmic and nuclear (By similarity).
-!- PTM: Autophosphorylated (By similarity) activated by provirus insertion in murine leukemia virus-induced T-cell lymphomas.
-!- SUMILARITY: Belongs to the Ser/Thr protein kinase family. PIM
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This SWISS-PROT entry is copyright. -!- CATALYTIC ACTIVITY: ATP + a protein = ADP + a phosphoprote:
-!- PTM: Autophosphorylated.
-!- SIMILARITY: Belongs to the Ser/Thr protein kinase family. I subfamily.
                                                                                                                                                                                                                                                       Name=PIM3; Synonyms=PIM-3;

Sequence 9, Application US/09237543A

Patent No. 6143540

GENERAL INFORMATION:
APPLICANT: Kapeller, ROBANA

TITLE OF INVENTION: NOVEL MOLECULES OF THE HK
TITLE OF INVENTION: AND USES THEREOF
PILE REFERENCE: 035800/175631

CURRENT APPLICATION NUMBER: US/09/237,543A

CURRENT PILING DATE: 1999-01-26

NUMBER OF SEQ ID NOS: 11

SOFTWARE: Patentin Ver. 2.0

SEQ ID NO 9

LENGTH: 313

TYPE: PRT
ORGANISM: Homo Bapiens

Sequence 26, Application US/08461379A
Patent No. 5871961
GENERAL INFORMATION: Nucleic Acids Encoding CRS Polype
TITLE OF INVENTION: Nucleic Acids Encoding CRS Polype
TITLE OF INVENTION: Nucleic Acids Encoding CRS Polype
TITLE OF INVENTION: Expression Thereof
NUMBER OP SEQUENCES: 35
CORRESSEE: Ratner & Prestia
ADDRESSEE: Bennsylvania
COUNTRY: USA
ZIP: 19482
COMPUTER READABLE FORM:
MEDIUM TYPE: Ploppy disk
COMPUTER: 1BM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0,
SOFTWARE: Patentin Release #1.0,
SOFTWARE: PATENTIN NUMBER: USA
FILING DATE: 5-UNE-195
PRIOR APPLICATION NUMBER: USA
APPLICATION NUMBE

Sequence 7, Application US/09237543A

Patent No. 6143540

GENERAL INFORMATION:
APPLICANT: Kapeller, Rosana
TITLE OF INVENTION: NOVEL MOLECULES OF THE HK
TITLE OF INVENTION: AND USES THEREOF
PILE REFERENCE: 035800/175631
CURRENT APPLICATION NUMBER: US/09/237,543A
                                                      र है र

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   human HKID-1 polypeptide, a member of serine/threonine kinase superfamily. The method involves contacting a cell expressing the polypeptide or nucleic acid with an agent to modulate the level or activity of polypeptide, or level of nucleic acid molecule. The method i useful for modulating the level or activity of HKID-1 polypeptide or polypucleotide in a subject having or predisposed to having a disorder involving cancer. Modulating HKID-1 expression or activity is useful for therapeutic purposes, for treating cellular proliferative and/or differentiative disorders including cancer or haematopoletic neoplastic disorders e.g. Acute promyeloid leukaemia (APML), Chronic myelogenous leukaemia (CML) and Waldenstrom's macroglobulinaemia (WM). This is the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention describes a method of modulating the level or a human HKID-1 polypeptide, a member of serine/threonine kinase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Example
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           expressing

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁
                                                                                                                                                                                            Sequence 313
                                                                                                                                                                                                                                                               The present invention relates to a method of identifying pain-regulating compounds, involving screening candidate compounds for interaction with PIM1 or PIM3 kinase. PIM1 and PIM3 proteins and coding sequences are useful for treating chronic pain, particularly of neuropathic or inflammatory origin (e.g. where associated with diabetes, cancer, AIDS or
                                                                                                                                                                                                                                                                                                                                                                                                                                                         Method for identifying analgesics, useful particularly for treating chronic pain, by screening compounds for interaction with PIM-1 or kinase, or related compounds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AA019789;

                                                                                                                                                                                                                                                                                                         US-10-705-757-3 (1-1302) x ABR62938
                                                                                                                                                                                                                                                                                                                         The present sequence is the protein sequence of the rat serine/threonine protein kinase and proto-oncogene, PIM-1 PIM-1 proteins are the paralogues of novel human and murine PIM-3 proteins (see ABR62932 and ABR62933) of the invention, which are therefore expected to be involved in cancer and cell growth regulation. PIM-3 is also involved in the cell growth regulation. PIM-3 is also involved in the cell growth resistance and type 2 diabetes mellitus. The invention relates to the use of PIM-3 nucleic acids and proteins in: screening assays for compounds that modulate insulin resistance or type 2 diabetes mellitus; detection assays for detecting insulin resistance or type 2 diabetes mellitus (e.g. chromosomal mapping, tissue typing, forensic biology); predictive medicine (e.g. diagnostic or prognostic assays, monitoring clinical trials, pharmacogenomics); and for the preparing a medicament for the treatment of insulin resistance or type 2 diabetes mellitus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New human or murine PIM-3 DNAs or polypeptides, useful for agent for identifying anti-type 2 diabetes mellitus drugs, treating insulin resistance or type 2 diabetes mellitus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        20-JAN-2003; 2003WO-EP000492

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Alignment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence is the protein sequence of human Pim1, a protein related to tyrosine threonine kinase (TTK, see ABP54938). TTK polymuclectides and polypeptides of the invention encompass polymuclectides and polypeptides for the invention encompass polymuclectides and polypeptides so the invention encompass polymuclectides and polypeptides so the invention sequence similarity or sequence identity to human TTK and other genes and gene products related to TTK, such as Pim1. The invention is based on the finding that TTK is differentially expressed in various forms of cancer. It provides methods for the identification of cancerous cells, especially breast cancer and colon cancer cells, by detection of expression levels of TTK, as well as diagnostic, prognostic and therapeutic methods. These methods can be used as the basis of rational therapy. Assays for identifying molecules that inhibiting the activity of these genes in cancers, as well as methods of inhibiting tumour growth by inhibiting the activity of TTK are also provided

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ई
The invention describes a method of modulating the level or activity of human HKID-1 polypeptide, a member of serine/threonine kinase superfamily. The method involves contacting a cell expressing the polypeptide or nucleic acid with an agent to modulate the level or activity of polypeptide, or level of nucleic acid molecule. The method useful for modulating the level or activity of HKID-1 polypeptide or polypeptide or activity of HKID-1 polypeptide or polypeptide or activity of HKID-1 polypeptide or polypeptide or method useful for modulating the level or activity of HKID-1 polypeptide or polypeptide or polypeptide or polypeptide or predisposed to having a disorder
                                                                                                                                                                      Modulating levels or activity of HKID-1 polypeptides, a member of serine/threonine kinase superfamily, for treating cancer, by contacting cell expressing the polypeptide with a modulator of the polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            HKID-1; serine/threonine kinase; cellular proliferative disorder; differentiative disorder; cancer; haematopoletic neoplastic disorder; Acute promyeloid leukaemia; APML; Chronic myelogenous leukaemia; CML; Waldenstrom's macroglobulinaemia; WM; human.

involving cancer. Modulating HKID-1 expression or activity is useful for therapeutic purposes, for treating cellular proliferative and/or differentiative disorders including cancer or haematopoietic neoplastic disorders e.g. Acute promyeloid leukaemia (APML), Chronic myelogenous leukaemia (CML) and Waldenstrom's macroglobulinaemia (WM). This is the amino acid sequence of a human protein kinase phosphorylation site

                                                                                                                                                                          US-10-705-757-3 (1-1302) x AAO19788 (1-313)
                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to a method of identifying pain-regulating compounds, involving screening candidate compounds for interaction with pIMI or PIM3 kinase. PIM1 and PIM3 proteins and coding sequences are useful for treating chronic pain, particularly of neuropathic or inflammatory origin (e.g. where associated with diabetes, cancer, AIDS or neurodegenerative diseases). The present sequence is human PIM1 kinase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Method for identifying analgesics, useful particularly for treating chronic pain, by screening compounds for interaction with PIM-1 or kinase, or related compounds.
